Preface

Children are interested in society at an early age. The economy makes it possible to understand society in order to improve it. If the child has the ability to grow while knowing society, he will want to use the real economy to make important choices while improving society.

To Read

Every pictures of this book were found on wikimedia commons. You can find the licenses and files using names of inserted files.

I advise electronic ink readers not linked to a website selling books. Even if they are more expensive, they will allow you to read every authors present in my books. Good readings !

Why ?

Why do I Like Desserts ?

Desserts are composed with sugar for a part. Sugar is very much appreciated by our tongue, the one that tastes the dessert. However, we do not stop there. Dessert is at the end of meals. So many children are anxious to get to the end of the meal. Then dessert becomes even more valuable. The value it is, therefore, a lack. If the parents do not want to give dessert, then we wait even more impatiently for the other meal. It is a lack that creates the desire to value our dessert. So value is wanting something that you need or like.

My Notes

Read Robinson Crusoe's book wondering what value is.

Usually a cake is very valuable.

Why can Some Own Many ?

Do you know that industries make a lot of toys at the same time? Some children have a lot of toys because industries make a lot of them. An industry creates the same toy serially in different models. Series are same toys made primarily with machines. Machines are large tools, mechanisms that each create one or more parts of the toy. There is a small labor's intervention, those who work in industries, to complete the machines' work.

Industries need to be protected, because engaging to make toys serially takes a long time. As some people say, time is money. With money you can buy toys. But the one who has a lot of money is not forced to create an industry, especially if he uses the money for himself. Indeed, many believe that it is about thinking about himself, while thinking about others allows a better growth. But growth brings happiness. Growth also allows us to participate creating industries.

So if you don't protect your industries, you may not be able to buy toys, food, tools. Otherwise we can discover toys that carry us on beautiful journeys.

If we have too many toys, they lose value. Indeed, if we are spoiled with toys, we know that we can have them whenever we want. We don't necessarily want to play anymore, because we don't get impatient to play anymore. So toys lose value when there are too many.

Also some rare toys, which we've heard about ads, are wanted by yourself if you haven't tried them out. The known rarity gives value to a toy. The ad is trying to make you thinking your toy is rare, which it is not true. To see this requires visiting an industry.

Ask to visit an industry.

A child playing

Can we Produce Infinitely ?

Everything is created in a finite way. On the other hand, it is not possible to determine everything that has been created. Even life has in it an infinity's notion, because nothing can be organized randomly, because discovering something new and real is a matter of the divine. Indeed, how is it that so much can be done with inert ? How can life have born from inert ? We have asked ourselves this question, often lying to ourselves. Now we know, with Einstein, that there is another universe that creates life in ours, through gravity. Gravity, which is about one body going to another, wherever they were, needs another universe to exists. So there is an infinity's notion in life, which has born randomly, but life creating life. Leibniz and Vernadsky explain this infinity's notion of life in the universe very well.

My Notes

Read the Monadology of Leibniz. Write next.

Leibniz

What is Being Rich ?

Those who own a tool but do not know how to use it do not need it. So those who have a tool they don't know what to do get rid of it. Someone who owns a lot of things, but doesn't use them, doesn't actually own them. So it is permissible for the poor to use unused houses. It's economical. The economy is to use that is already done. The rich man owns this house. But what good is it to him if he doesn't use it ?

My Notes

Meditate about that you're not using. Why not sell it or give it away ?

Louis Armstrong was wealth with his trumpet

Why is my Toy Broken ?

It's not normal for a toy to break easily. We have to make it last a long time. So creating toys that don't last long is anti-economic. We don't save enough work on it. If we had to recreate toys too many times, we shouldn't end up making everyone work on this task.

My Notes

Trying to fix a broken toy. If it fixes itself, it's because it was well designed.

What about looking at your broken toys?

Why do some People Own Everything ?

Some rich people have the right to create money. If only one person owns the money, he only uses it for himself. On the other hand, if a community, like a country, owns the money, the money benefits to the whole country. Thus the country grows. Otherwise it regresses.

My Notes

Ask your parents if currency is public or private. They may answer you with difficulty.

Difficult is to own for some

What is Nature ?

Nature is that lives around you. Nature is either visible or invisible. It's so small, you can't see it. We think there's a soul behind every life. This soul allows to grow and to find new ideas, unlike robots.

Your parents may know how nature works, but they don't know why. Science permits to know how nature works, in order to find scientific ideas to improve it. Humans can improve nature through science. Scientists are finding new ideas to improve nature and to create new tools.

My Notes

Write to find out how we grow. What's hidden behind it ?

Mammoth

Why Nature ?

Only Jesus said that humans, at the top of nature, could help God, if they sought the truth, if they believed in God, or if they gave their money to the poor. As the poor have no money, Jesus said it was easier for them to get Paradise to help God.

My Notes

Read a bible for children.

Jesus Christ

Why are my Questions Amazing ?

Your questions may surprise your parents. Indeed, sometimes, you give to your parents answers to their indecision. But how do you already know how to do that ? Well, because you've already done the hardest thing while learning to talk and to walk. Indeed, you have tried to speak or to walk, so you have tested. And then you thought about whether to say you were misunderstood or to do something better. So your mind has awoken a hypothesis, that a computer can't do, to learn to talk or to walk. It's called scientific thinking, the only thing robots can't do. You learn better than a computer, because you use scientific thinking to learn how to talk and to walk. So only the scientific jobs will be important in the future. So your parents' profession can change. Indeed, to find new hypotheses, we must practice on society's limits, in order to grow the machines, the tools.

My Notes

Read a book on Plato on wikibooks, the one that created scientific thinking.

Children have always inspired

What is Work ?

Understanding the work's basis is very recent, so it is difficult to understand. Work is producing projects. A project is a goal to achieve, with a beginning and an end. You probably know it a little, probably without being told.

With economics, we now know that work is provided by energy. But what is energy? Well when you work you move and you can be hot. Heat is an energy output. When the air is hot, it means that the sun has brought energy to earth.

The economy measures how to produce useful work. We now know that economics measures energy to make things. The more energy is dense on one point, the more works can be done.

My Notes

Read the beginning of Nicolas Léonard Sadi Carnot's book, on wikisource.

The farms' work is
the most
important

Society

What is Society ?

Your family is a society. A company is a society. A country is a society. A society is an individuals' organization making works. Describing a society allows us to know how the society is organized. Describing your family helps you to describe a part of the society, which could be the society.

My Notes

Write about your family to guess that is similar to society.

A family is a society

How to Understand Society?

Architecture makes it possible to understand society. Architecture consists to build something with elements and a plan, so the description you want to build. When we have built something we can try to understand how society is built.

My Notes

Ask your parents to help you building something, to design around you.

Museums have beautiful architectures

Why Is there Society?

We do not know exactly why society is here. We know its story. To explain why there is society, we have to ask why everyone is there. Ask this to your friends. They will answer you in the dark. To understand why everyone is here, you must understand why you live. All we know about life is that the universe can create life, that there is someone who creates life, we do not know exactly why. Some people think that life existed before the universe.

Others do not ask any questions about life. They are atheists. Those who say that someone creates life are told believers. They say that a God or different Gods create life. They gather in worship's places to pray to others.

My Notes

Do you think we know why society is organized, if we do not know why there is life? This is a quest for truth.

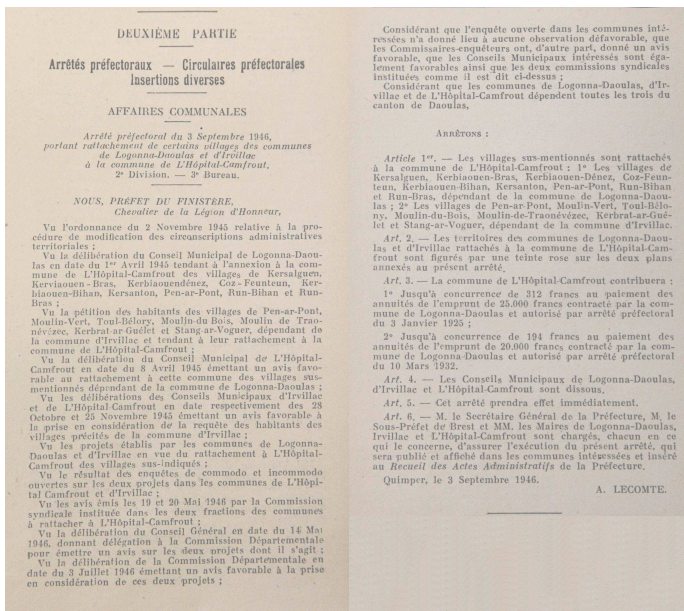

**A worship's
place : A
cathedral**

Why Should I Respect the Rules?

You can wonder why your parents are setting rules on you. First of all, we must not break anything, so that we can use them. It is a basic law of society. We could not survive if everything was broken. So laws allow a society to grow. Laws are created by the equality's principle, which consists to say that one's freedom stops when others' freedom begins. We can undo the laws that do not follow that way.

My Notes

Do you think you respected the freedom of others? Discuss about that with your parents.

An order is a temporary law

What is Capital?

Capital is that creates toys, tools, food. The capital that creates food is life, earth, money. Money is a way for the farmer, the one who crops earth, to quickly find his land capital. So when he owns land, life provides him food. All of this requires respect to laws that govern society.

My Notes

Do you think you have capital? Think about it and ask your parents to show them this text.

Earth is our capital.

What Is Appropriation?

There are two movement's types in your society. Either new owners are set. An owner is someone who owns at least one house. These owners therefore own their home. Few owners have more and more things. Indeed, if some owners can create money, they can buy everything. Indeed money is not necessarily created for everyone. Those who buy their money are then dispossessed, more and more.

Thus, when the currency belongs to the country, to the nation-state, to every citizens, there is a growth's movement of new owners. Otherwise, those who own the money drive up prices on that they buy, so houses. Thus the price of houses increases too much. Then, when they have bought too many houses, they buy the rest, especially the intermediaries who sell the products. Every prices rise then. So the dispossessed can not buy anything anymore. This can create a revolt. If people know that money is private, currency can become public to belong to the state. Then there is a creation's movement of owners.

My Notes

Is it easy to become a homeowner right now?

Bourgeois houses, so owners' house

Why that Is Rare Is Expensive?

Your mom probably likes rings. But she does not want every sort of rings. She wants gold or diamond rings. Gold is yellow metal. The diamond is a transparent stone, a crystal in fact. At first these two elements were rare.

Now we can produce diamonds compressing stones. Also those who own gold have a lot of money. So now, gold rings are more valuable than diamond's rings without gold. Traffickers use this desire to own, raising prices. Thus gold is worth more and more expensive. Diamonds' price have decreased when they could be produced a lot.

My Notes

What would you like to own? Is it easy for you to own it?

**An Athena's
gold ring**

Building Society

You probably have something in your mind that you would like to do. But, to do this thing, you need to get help from others. But the others do not want to follow you. So you have to convince them. It's called doing politics. The policy is to convince others to carry out their project.

Those who make politics get rich from others. So, if you play politics, you may realize that you are wrong, but you will know how to be right. The one who is right has sees far away. Feeding on others allows you to get rich for your happiness. Making politics requires certainly to question, but making policy enrich you a lot.

My Notes

Are you often questioned? If so, you can do politics.

**Jean Jaurès
convincing**

How ?

Do I Have the Right Toys?

If you want a toy to interest you, ask your parents about Maria Montessori's toys. She created toys that make you growing and creating. Now, thanks to industries, every child could have these toys. Every children should grow now through industries.

A Montessori toy is explained with the parents, then you use it as a tool, while playing, for your happiness. You can learn more easily to create industries, to grow, then to have happiness.

My Notes

Do I have creative toys according to Montessori?

**Maria
Montessori**

Where does this come from ?

Everything you have comes from nature. Everything you have around you was created from the Earth, either it is living or inert. Everything human creates is inert. The human, on the other hand, can change life, as God do also.

When humans determine that they need in nature, they determine some resources. A resource permits to humans to create their tools, or children's toys.

At the beginning the resources of the human were woods and stones, in the period called prehistory. The human was only associating these elements.

Then the Human began to separate that was in nature, essentially heating it up. He began to separate elements and then combined them, just like he linked them before. To separate elements, he linked some. The Greeks wrote that there were elements that were difficult to separate, called atoms.

It was a Russian named Mendeleev who determined long after elements that we could not unlink easily.

Shortly after, it was determined that atoms could produce a lot of energy, which creates heat. Atoms are inert energy. It has been determined that energy producing heat can work instead human, so that the human has only to create.

A resource is therefore a set of atoms that humans need to produce energy, inert tools or toys, or even to change life.

My Notes

Go to a prehistoric museum to see how our first tools were combined.

An axe is a set of wooden stick with a sharp stone or metal. The wood comes from the tree. The stone comes from the ground. A metal is a dense atom coming from the ground, which has been separated. A combination of atoms is called alloy.

Which Job to Choose ?

After 18 years, you will go to the work's world. You will have got a basic salary that will allow you to survive. Many tasks will have been automated. The only job that robots can not do is creating, being artistic, producing, being journalist or searching.

We can believe that robots can do that, but they do not create anything new. They only adapt. To conceive a non-abstract show requires a scientific and creative brainstorm, which the robot does not have. We will be in the design's business, to achieve our work.

There are jobs that individualize. For example, the sales profession tends to individualize. The seller has an interest to get someone alone to sell more products. The seller wants to buy cheap, to sell expensive, which pressures on industries. But industries are more important than services, such as sales. They will need engineers who will design the products.

Creative professions can individualize or not. It's up to the designer to see what policy he's applying. So we will be very good designers because we will be very much able to become one.

Either the designer speaks about the future, or the designer entertains, that is to say, thinks about something else. Entertainment allows finance to make people pessimistic. Talking about the future allows the designer wanting to do his best, liking any being creative. It is about transforming the everyday to grow, as his book can do. Giving desire to grow helps to encourage optimism, because life is changing.

My Notes

What should you like to create ?

**A researcher at Polytechnique University,
created by Lazare Carnot**

Why Do Prices Grow ?

Those who own money can rise prices, which prevents them from acquiring tools easily. Indeed, if a lot of money is created, it loses value. So prices go up because the financial, the one which creates the money on 2018, uses his money in the economy. So you can not buy food anymore.

The financial, as he has power, can buy at a cheap place, to sell to another human, because the product has more value in this place. This is called traffic. Traffic, anti-economic, consists to increase prices' differences. The financial fears creative people. That's why he prevents selling Montessori toys.

My Notes

Try to know that is not rare and expensive despite everything.

**This money has
got no
productive value**

How Are We Here ?

There is a long story behind our society. At first, we were animals, monkeys. Then, in Africa, many human species are born. A species is individuals that can easily reproduce with each other. Our human species have mastered the tides and the fire, then it has colonized Africa. They found other human species, such as Neanderthal and Homo Erectus. Some, like curious Chinese, have married a lot with them. They have acquired a beautiful mankind's heritage.

But the fire only allowed to keep the food for a long time. The gathering helped to create the first villages. Then the crop made it possible to reuse the seeds, which makes the plants grow. Then water power, irrigation, allowed to produce even more food. We then created large cities.

Then the wheel made it possible to solve a little the problems of remoteness, which prevented the trade, then allowing to create crafts. Crafts started to create factories, using manual machines.

Then we built the first dam, in order to have more water to produce. Then we created the first channels, artificial rivers, to communicate more easily for the trade.

Then we mastered the sun with the windmills, allowing to eat a better flour of bread, when there was wind. We have therefore regularly gained in life's quality.

Then coal power, unused until then, made it possible to create the first trains, preventing from traffic by their easy access. Then the gasoline engine, which makes it possible to tow the cars in 2017, has made it possible to create major works, large dams and very long and very wide canals. We still produced more. There is still a need to create channels and trains in Africa and South America on 2018.

Lately we break the tiny, whose is not visible, that is the atom. We thought we could not break the atoms, but we can break

some. We can even fuse atoms. This is called nuclear. Nuclear power is not used to its full potential on 2018. In fact, thorium atom could make it possible to green the deserts and to colonize the sea, by desalting sea water. Indeed, we can not drink sea water because of the salt.

My Notes

Read accessible books on the energy's history or great works.

**Human
sculpts
nature**

Who Permitted That ?

Scientific discoveries have made it possible to reach that point. We do not know who invented writing and the wheel. The Greeks, with their democracy, so the power of the people by the people, have made it possible to publish the scientific process. Before, it was those who had time to think who created the tools. We used writing.

Plato, as Greek Socrates' student, published the scientific brainstorming, in order to understand how to transform the nature. Then Kepler created the astronomical revolution, studying the planets. Then Denis Papin, with Leibniz helping, allowed the creation of the steam engine, running on coal. Then Nicolas Sadi Carnot allowed the gasoline engine. Then Einstein allowed the last great expansion, the nuclear great expansion.

My Notes

Learn about these scientists.

**Athenes'
school in
Greece**

Who Has Organized Society ?

Human has got the capacity to be social. This comes from the monkey. But transforming society is now lead by scientific creativity. The Chinese have always had a great nation. The Greeks created the first democracy.

Colbert, in France, created a revolution protecting growth, before the French revolution. Colbert allowed to create roads and canals, the first great national works. He was a genius of wealth creation linking.

Lazare Carnot, during french's Revolution, created the most prestigious French schools in France.

Hamilton, in the United States fought for the public currency, to sublimate Colbert's works, thanks to Henry Charles Carey next.

Then German education was built by Humboldt and Schiller. Then Johann Friedrich Herbart, poorly copied, set up the German student's emancipation, that is to say the German learning. Einstein went from these schools.

In the United States, Roosevelt destroyed the finance, those who owned the money, to allow a new emancipation in the United States with public money.

My Notes

Learn about these educators, scientists or politicians.

**Jean-Baptiste
Colbert**

Growth Story

I will tell you how the growth takes place. First of all, there is a moment when few have everything. So people are more and more aware about deception. But those who own hide their bet, more and more difficultly. Those who own fear the most creative people because they want the others' growth in general, because growth requires changing. But those who are not creative do not like changing. But if the creative ones disappear, it's the end of a country, because the creatives allow a country to grow. So creatives end up convincing others to become creative. Then the change to grow can take place. If growth does not return, those who have a little need to leave the country, action that they have already done for a long time.

At the beginning of the monetary broth, the politicized creatives, called resistant, are five percent, then there is a boom when they convince to grow the country. When the public currency is active, allowing to grow the country, many become creative and happy.

My Notes

Would you like to grow to stay creative?

**Jean Moulin was
a resistant**

How to Grow Society ?

To grow society, you need to have access to a public currency. We can first look for support from a country with a public currency. But we can also introduce public currency in his country.

First, those who own the money have created a monetary brothel. We do not know what exactly can be bought with the money. We must therefore clean banks. Teh most important is that your parents own as money. So you have to keep that money. But the money that is used by those who own the money is worthless. We must keep workers's money, to destroy the money that impeach the country to grow.

Money is in the banks. Banks that store money from your parents are called deposit banks. Banks that store money from finance, those who own the money, are called financial banks. But these two banks can be mixed. We realized that cutting banks in half, to separate your parents' deposits from finance, permits to destroy finance. Indeed finance uses money deposits to be helped.

So we can create a public currency. The public currency will be used to help industry and agriculture, which produces so. Indeed, finance did not care about that because it had enough for it. So we help agriculture to the maximum creating canals and energy, energy which permits to realize canals. Also we help the industries' trade, thanks to the trains. So the country grows. Industries, namely industry and agriculture, sustain the rest of the country. The country is growing. We can live a long time in the country. The life's quality is improving.

My Notes

Inquire about the Glass-Steagall, which helps to clean the banks.

Militating to break the banks in half
